

WE'RE LIGHT ON THE
Environment

From day one, our goal has been to redefine lighting with innovation, responsibility, and care for our planet. We're proud to continue reducing our environmental impact and leading the way in sustainable lighting.

HERE'S HOW WE'RE MAKING A DIFFERENCE

75% Less Material:

Our innovative MEO technology creates slim, efficient designs that use significantly less material than traditional linear lighting.

Local Manufacturing:

Products are made in Huntington Beach, CA, and source 90% of vendors within 10 miles, reducing emissions and supporting American jobs.

Recycling for Impact:

We recycle 100% of our e-waste, glass, plastics, and metals, alongside using fully recyclable packaging.

Eco-Friendly Components:

All aluminum extrusions are recyclable, and our electronic components meet RoHS compliance standards.

At Extant, Expect More.
